Sync happens. Protect your data and accounts with the best detection and accuracy in protecting against advanced persistent threats.*

Block and neutralize malicious files

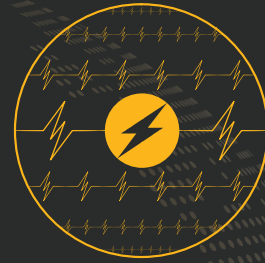

Use global intelligence from one of the world's largest cyber intelligence networks to quickly identify high risk files. CloudSOC uses file reputation and policy controls to prevent malicious files in the cloud from infecting your organization.

Identify and eliminate malware

Safeguard your cloud accounts and users from malware in the cloud with Symantec's industry-leading anti-malware protection. Continuously scan content being uploaded and stored in cloud apps and eliminate malware before it spreads.

Defend against malicious URLs

CloudSOC CASB scans content uploaded and downloaded in cloud apps for malicious URLs using WebPulse technology, powered by Symantec's Global Intelligence Network, to identify and dynamically categorize URLs into various types of malicious content. Safeguard your organization via automated policy for handling malicious URLs.

Global Threat Intelligence Network*
